

HOW TO DROP EVERYTHING IN

Architecture of Grace · Universal SEL Check-In

A plain-language guide to putting the latest screener live and filling in the downloads. No code required.

⚠️ REQUIRED LEGAL STEP BEFORE STUDENT USE Before deploying this tool to students or enabling sync, your district must complete its own privacy and legal review and execute a Student Data Privacy Agreement (DPA) with Architecture of Grace. Distributing the check-in to students without a signed DPA may violate district policy, FERPA, COPPA, or state student data privacy laws. This document is for technical deployment only and does not replace legal review.

What's New in This Version

Two changes were made with children's input. Nothing about scoring, privacy, or saved results changed — results from earlier check-ins are still valid and comparable.

- A new empathy question. Item 13 now reads “I notice when someone around me is having a hard time, and I care about how they feel.” It replaced the old conflict/perspective-taking wording, sits in the same Social Competency & Repair domain, and is scored the same direction. Spanish and the adult version were updated to match.
- A dedication line. Just before the survey begins, a quiet italic line now notes that some questions were shaped with the help of children. It appears in English and Spanish automatically.

Because the live site at aog-checkin.netlify.app may still be an older build, you'll need to re-deploy (below) for these changes to go live.

Putting the Latest Version Live

The file to deploy is `index.html` (the one delivered alongside this guide). The steps:

1. Save `index.html` somewhere you can find it (your Downloads folder is fine). It must be named exactly `index.html`.
2. Go to app.netlify.com and sign in.
3. Open your site (`aog-checkin`) and click the Deploys tab.
4. Drag `index.html` onto the deploy drop zone (“Drag and drop your site folder here”). Wait for the green “Published”.
5. Open aog-checkin.netlify.app in a fresh tab to confirm. If it looks old, do a hard refresh (or check on your phone in a private tab) — it's almost always a cached page, not a failed deploy.

The link never changes, and viewers' saved results are safe — every response lives in that person's own browser, not in the file you're replacing.

Filling in the Downloads Library

On the public Guide, the Downloads tab lists every printable. Each item shows a download button only once it has a link; until then it reads “Link coming soon.” To add links:

1. Host the actual files where anyone with the link can view them — e.g. Google Drive or Dropbox set to “anyone with the link,” or a `/files` folder dragged onto Netlify alongside `index.html`.
2. Open `index.html` in any plain-text editor and search for the comment “EDIT ME: paste a link into each url” — it sits just above the list named `RESOURCE_LIBRARY`.
3. For each item, paste your hosted link between the quotes in its `url:` field. Leave it empty (`url: ""`) for anything not ready to share, and delete any item you won't distribute.

4. Save, then re-deploy using the steps above.

Good to Know

- The Guide is public. Anyone can open the Guide, the ecosystem map, the resource index, and downloads with no code. The access code only protects the Results dashboard.
- The access code “educator” gates results only. Change it near the top of the script if you ever need to.
- Spanish is automatic. The EN/ES toggle covers the whole participant experience, including the new empathy item and dedication line. The dashboard stays in English.
- Nothing is transmitted by default. Responses save privately to each device. There is no server and no account unless you explicitly enable sync.

Every score is a flag, not a diagnosis.
